UL File No.: E43019 CSA File No.: LR26550

Sealed construction of the NFEB offers high reliability and prevents soldering flux vapors from entering the relay and condensing as an insulating film. So they are simple to clean with any degreaser and detergent cleaner due to the PBT case material, without affecting the maximum contact reliability of the relays.

## TYPICAL APPLICATIONS

NF relays are widely acceptable in applications where small size and high sensitivity are required.
Such applications include: Electronic equipment, Household applications,

Alarm systems, Office machines, Communication equipment, Measuring equipment, Remote control systems, General control circuits, Machine tools, Industrial machinery, etc.

ORDERING INFORMATION

(Notes) 1. For VDE recognized types, add suffix VDE.
2. For UL/CSA recognized type, add suffix-A, as NF2EB-12V-A whose ground terminal is cut off.
3. Standard packing Carton: 20 pcs.; Case: 200 pcs.

## REFERENCE DATA

1. Life curve

2. Contact reliability

Test conditions:

1. Contact current/voltage: $10 \mu \mathrm{~A} 100 \mathrm{mV} 1 \mathrm{kHz}$
2. Cycle rate 20 cps .
3. Miscontact detection level: 1 mW (= $100 \Omega$ )
4. Detection method: Observation of all changeover contacts

Test result:
$\mathrm{m}=1.5$
$\mu=21.2 \times 10^{6}$
$95 \%$ confidence level $=3.1 \times 10^{6}$
17 contacts out of 20 achieved 10 million no miscontact operations.
2. Coil temperature rise (resistance method)

5. High temperature test

Test conditions:
Ambient temperature: $80^{\circ} \mathrm{C} \pm 2^{\circ} \mathrm{C}$
Test method:

1. All contacts were switched for 100 operations on 2

A 30 V DC resistive load.
2. Samples then were exposed to $80^{\circ} \mathrm{C}$ temperature for 5,000 hours, continuous.

3. $\mathrm{H}_{2} \mathrm{~S}$ gas test

3. Contact resistance was measured with HewlettPackard testing equipment.
Test result:
Amber relays showed a stable spread of contact resistance within the initially specified $50 \mathrm{~m} \Omega$ after 5,000 hours exposure.
