UL File No.: E43149 CSA File No.: LR26550

- Ultra low-profile: 6 mm . 236 inch in height comforming to EIA standards (Tape height: max. 6.5 mm .256 inch)

- Tape and reel package is available as standard packing style
- Surge withstand between contacts and coil: 2,500 V
- Breakdown voltage between contacts and coil: $1,500 \mathrm{~V}$
- 2 Amp. high capacity
- High sensitivity:

2 Form C; 140 mW power consumption (Single side stable type)

- Surge voltage withstand: 1,500 V FCC Part 68

## SPECIFICATIONS

## Contact

| Arrangement |  |  | 2 Form C |
| :---: | :---: | :---: | :---: |
| Initial contact resistance, max. (By voltage drop 6 V DC 1A ) |  |  | $75 \mathrm{~m} \Omega$ |
| Contact material |  |  | Gold-clad silver alloy |
| Rating | Nominal switching capacity (resistive load) |  | $\begin{gathered} 2 \text { A } 30 \text { V DC, } \\ 0.5 \text { A } 125 \text { V AC } \end{gathered}$ |
|  | Max. switching power (resistive load) |  | $60 \mathrm{~W}, 62.5 \mathrm{VA}$ |
|  | Max. switching voltage |  | 220 V DC, 125 V AC |
|  | Max. switching current |  | 2 A |
|  | Min. switching capacity |  | $10 \mu \mathrm{~A} 10 \mathrm{mV}$ DC |
| Nominal operating power | Single side stable |  | $\begin{aligned} & 140 \mathrm{~mW}(1.5 \text { to } 12 \mathrm{~V} \text { DC) } \\ & 200 \mathrm{~mW}(24 \mathrm{~V} \text { DC) } \\ & 300 \mathrm{~mW}(48 \mathrm{~V} \text { DC) } \\ & \hline \end{aligned}$ |
|  | 1 coil latching |  | $\begin{aligned} & 70 \mathrm{~mW}(1.5 \text { to } 12 \mathrm{~V} \text { DC }) \\ & 100 \mathrm{~mW}(24 \mathrm{~V} \text { DC) } \end{aligned}$ |
|  | 2 coil latching |  | $\begin{aligned} & 140 \mathrm{~mW}(1.5 \text { to } 12 \mathrm{~V} \text { DC) } \\ & 200 \mathrm{~mW}(24 \mathrm{~V} \text { DC) } \end{aligned}$ |
| UL/CSA rating |  |  | 2 A 30 V DC 0.3 A 110 V DC 0.5 A 125 V AC |
| Expected life (min. operations) | Mechanical (at 180 cpm ) |  | $10^{8}$ |
|  | Electrical <br> (at 20 cpm ) | $\begin{aligned} & 2 \text { A } 30 \text { V DC } \\ & \text { resistive } \end{aligned}$ | $10^{5}$ |
|  |  | 1 A 30 V DC resistive | $2 \times 10^{5}$ |
|  |  | 0.5 A 125 V AC resistive | $10^{5}$ |

## Characteristics

| $\begin{array}{l}\text { Initial insulation resistance*1 }\end{array}$ |  |  | Min. $1,000 \mathrm{M} \Omega$ (at 500 V DC) |
| :--- | :---: | :---: | :---: |
| $\begin{array}{l}\text { Initial } \\ \text { breakdown } \\ \text { voltage*2 }\end{array}$ |  |  |  | Between open contacts \(\left.\begin{array}{c}1,000 \mathrm{Vrms} for 1min. <br>

(Detection current : 10 \mathrm{~mA} )\end{array}\right]\)

## Remarks:

${ }^{* 1}$ Measurement at same location as "Initial breakdown voltage" section.
*2 Detection current: 10 mA
${ }^{* 3}$ Nominal voltage applied to the coil, excluding contact bounce time.
${ }^{* 4}$ By resistive method, nominal voltage applied to the coil; contact carrying current: 2 A .
${ }^{* 5}$ Half-wave pulse of sine wave: 6 ms ; detection time: $10 \mu \mathrm{~s}$.
${ }^{* 6}$ Half-wave pulse of sine wave: 6 ms .
${ }^{* 7}$ Detection time: $10 \mu \mathrm{~s}$.
*8 Refer to 4. Conditions for operation, transport and storage mentioned in Cautions for use (Page 108)

ORDERING INFORMATION

Surface-mount terminal variation

| Variation | Terminal style | Ambient environment |  |

## REFERENCE DATA

1. Maximum switching capacity

4-.(1) Electrical life
(2 A 30 V DC resistive load)
Tested sample: TQ2SA-12V, 6 pcs.
Operating frequency: 20 cpm
Change of pick-up and drop-out voltage (mounting by IRS method)

2. Life curve

3. Mechanical life (mounting by IRS methad) Tested sample: TQ2SA-12V, 10 pcs.

4.-(2) Electrical life
(0.5 A 125 V AC resistive load)

Tested sample: TQ2SA-12V, 6 pcs.
Operating frequency: 20 cpm
Change of pick-up and drop-out voltage (mounting by IRS method)

Change of contact resistance (mounting by IRS method)

7. Distribution of pick-up and drop-out voltage Tested sample: TQ2SA-12V, 50 pcs.
5. Coil temperature rise

Tested sample: TQ2SA-12V, 6 pcs.
Point measured: Inside the coil
Ambient temperature: $25^{\circ} \mathrm{C} 77^{\circ} \mathrm{F}$

8. Distribution of set and reset voltage

Tested sample: TQ2SA-L-12V, 30 pcs.

11.-(1) High frequency characteritics
6. Operate/release time

Tested sample: TQ2SA-12V, 6 pcs.

9. Ambient temperature characteristics Tested sample: TQ2SA-12V, 5 pcs.

11.-(2) High frequency characteristics Insertion loss characteristics

12.-(1) Malfunctional shock (single side stable) Tested sample: TQ2SA-12V, 6 pcs

Isolation characteristics

Frequency, MHz

10. Distribution of contact resistance Tested sample: TQ2SA-5V, 30 pcs. ( $30 \times 4$ contacts)
12.-(2) Malfunctional shock (latching) Tested sample: TQ2SA-L2-12V, 6 pcs.

13.-(1) Influence of adjacent mounting Tested sample: TQ2SA-12V, 5 pcs.
14. Pulse dialing test

Tested sample: TQ2SA-12V, 6 pcs.
( 35 mA 48 V DC wire spring relay load)

Circuit

13.-(2) Influence of adjacent mounting Tested sample: TQ2SA-12V, 6 pcs.
13.-(3) Influence of adjacent mounting Tested sample: TQ2SA-12V, 6 pcs.

Change of pick-up and drop-out voltage (mounting by IRS method)

Change of contact resistance (mounting by IRS method)

NOTES

1. Coil operating power

Pure DC current should be applied to the coil. The wave form should be rectangular. If it includes ripple, the ripple factor should be less than 5\%. However, check it with the actual circuit since the characteristics may be slightly different.
The nominal operating voltage should be applied to the coil for more than 10 ms to set/reset the latching type relay.

## 2. Coil connection

When connecting coils, refer to the wiring diagram to prevent mis-operation or malfunction.

## 3. External magnetic field

Since T-Series relays are highly sensitive polarized relays, their characteristics will be affected by a strong external magnetic field. Avoid using the relay under that conditions.
4. Conditions for operation, transport and storage

1) Ambient temperature, humidity, and atmospheric pressure during usage, transport, and storage of the relay:
TX(-SMD)/TX-D(-SMD)/TQ-SMD
(1) Temperature:
-40 to $+85^{\circ} \mathrm{C}-40$ to $+185^{\circ} \mathrm{F}$.
The temperature range is
-40 to $+70^{\circ} \mathrm{C}-40$ to $+158^{\circ} \mathrm{F}$ for the packaged relay.
TX-S(-SMD)
(1) Temperature:
-40 to $+70^{\circ} \mathrm{C}-40$ to $+158^{\circ} \mathrm{F}$.
for the package/non-package relay.
TQ/TF/TN/TK
(1) Temperature: -40 to $+70^{\circ} \mathrm{C}-40$ to $+158^{\circ} \mathrm{F}$
The temperature range is -40 to $+60^{\circ} \mathrm{C}$ -40 to $+140^{\circ} \mathrm{F}$ for the packaged relay.
(2) Humidity: 5 to $85 \%$ R.H.
(Avoid freezing and condensation.) The humidity range varies with the temperature. Use within the range indicated in the graph below.
(3) Atmospheric pressure: 86 to 106 kPa

Temperature and humidity range for usage,
transport, and storage:

## 2) Condensation

Condensation forms when there is a sudden change in temperature under high temperature, high humidity conditions. Condensation will cause deterioration of the relay insulation.
3) Freezing

Condensation or other moisture may freeze on the relay when the temperature is lower than $0^{\circ} \mathrm{C} 32^{\circ} \mathrm{F}$.
This causes problems such as sticking of movable parts or operational time lags.
4) Low temperature, low humidity environments
The plastic becomes brittle if the relay is exposed to a low temperature, low humidity environment for long periods of time.

## 5. M.B.B. contact relays

A small OFF time may be generated by the contact bounce during contact switching. Check the actual circuit carefully.
If the relay is dropped accidentally, check the appearance and
characteristics including M.B.B. time before use.

## 6. Packing style

1) Tube orientation for both standard through hole terminal type (including self-clinching type) and surface-mount terminal type.
The relay is packed in a tube with the relay orientation mark on the left side, as shown in the figure below.
Take note of the relay orientation when mounting relays on the printed circuit board.

(2) Tape and reel packing (surfacemount terminal type)
(1) Tape dimensions
(1)TX/TX-D / TX-S -SMD Relays
(i) SA type
mm inch

(ii) SL, SS type

## (2)TQ -SMD Relays

(i) SA type

(ii) SL,SS type

(2) Dimensions of plastic reel
(i) TX/TX-D / TX-S -SMD Relays
mm inch

(ii)TQ -SMD Relays

## 7. Automatic insertion

To maintain the internal function of the relay, the chucking pressure should not exceed the values below.

1) TX(-SMD)/TX-D(-SMD)/TQ/TF Chucking pressure in the direction A : $4.9 \mathrm{~N}\{500 \mathrm{~g}\}$ or less
Chucking pressure in the direction B : 9.8 $\mathrm{N}\{1 \mathrm{~kg}\}$ or less

Chucking pressure in the direction C : $9.8 \mathrm{~N}\{1 \mathrm{~kg}\}$ or less
TX(-SMD)/TX-D(-SMD) / TX-S(-SMD)

TQ
TF

Please chuck the Tolda portion.
Avoid chucking the center of the relay.
2) TQ-SMD

Chucking pressure in the direction A : $9.8 \mathrm{~N}\{1 \mathrm{~kg}\}$ or less
Chucking pressure in the direction B : $9.8 \mathrm{~N}\{1 \mathrm{~kg}\}$ or less
Mountimg pressure in the direction C : 9.8 $\mathrm{N}\{1 \mathrm{~kg}\}$ or less

Please chuck the Thlad portion.
Avoid chucking the center of the relay.
3) TN

Chucking pressure in the direction A : $9.8 \mathrm{~N}\{1 \mathrm{~kg}\}$ or less
Chucking pressure in the direction B: $9.8 \mathrm{~N}\{1 \mathrm{~kg}\}$ or less
Chucking pressure in the direction C : $4.9 \mathrm{~N}\{500 \mathrm{~g}\}$ or less

Please chuck the TسIII portion.
Avoid chucking the center of the relay. 4) TK

Chucking pressure* in the direction A: 9.8 $\mathrm{N}\{1 \mathrm{~kg}\}$ or less

Chucking pressure* in the direction B : $29.4 \mathrm{~N}\{3 \mathrm{~kg}\}$ or less
Chucking pressure* in the direction C: $9.8 \mathrm{~N}\{1 \mathrm{~kg}\}$ or less

Please chuck the سயlad portion. Avoid chucking the center of the relay. *Value of chucking pressure is shown by the value of weight pressed on the portion(4 mm dia.)

## 8. Soldering

1) Preheat according to the following conditions.

| Temperature | $100^{\circ} \mathrm{C} 212^{\circ} \mathrm{F}$ or less |
| :--- | :--- |
| Time | Within approx. 1 minute |

When soldering standard PC board terminals or self-clinching terminals, soldering should be done at $250^{\circ} \mathrm{C} 482^{\circ} \mathrm{F}$ within 5 sec .
2) When soldering surface-mount terminals, the following conditions are recommended.
(1) IR (Infrared reflow) soldering method

(2) Vapor phase soldering method

$\mathrm{T}_{1}=90^{\circ} \mathrm{C}$ to $100^{\circ} \mathrm{C} 194^{\circ} \mathrm{F}$ to $212^{\circ} \mathrm{F} \quad \mathrm{t}_{1}=90 \mathrm{sec}$. to 120 sec . $\mathrm{T}_{2}=180^{\circ} \mathrm{C}$ to $200^{\circ} \mathrm{C} 356^{\circ} \mathrm{F}$ to $392^{\circ} \mathrm{F} \quad \mathrm{t}_{2}=60 \mathrm{sec}$. or less $\mathrm{T}_{3}=215^{\circ} \mathrm{C} 419^{\circ} \mathrm{F}$ or less
(3) Soldering iron method

Tip temperature: $280^{\circ} \mathrm{C}$ to $300^{\circ} \mathrm{C}$

$$
536^{\circ} \mathrm{F} \text { to } 572^{\circ} \mathrm{C}
$$

Wattage: 30 to 60 W
Soldering time: within 5 sec.
(4) Other soldering methods

Check mounting conditions before using other soldering methods (hot-air, hot plate, pulse heater, etc.).

## Remarks

- The temperature profile indicates the temperature of the soldered terminal on the surface of the PC board. The ambient temperature may increase excessively. Check the temperature under mounting conditions.
- The conditions for the infrared reflow soldering apply when preheating using the VPS method.

## 9. Cleaning

In automatic cleaning, cleaning with the boiling method is recommended. Avoid ultrasonic cleaning which subject the relay to high frequency vibrations. It may cause the contacts to stick.
It is recommended that a fluorinated hydrocarbon or other alcoholic solvents be used.

## 10. Others

1) If in error the relay has been dropped, the appearance and characteristics should be checked before use without fail.
2) The cycle lifetime is defined under the standard test condition specified in the JIS* C 5442-1986 standard (temperature 15 to $35^{\circ} \mathrm{C} 59$ to $95^{\circ} \mathrm{F}$, humidity 25 to $85 \%$ ). Check this with the real device as it is affected by coil driving circuit, load type, activation frequency, activation phase,ambient conditions and other factors.
3) For secure operations, the voltage applied to the coil should be nominal voltage. In addition, please note that pick-up and drop-out voltage will vary according to the ambient temperature and operation conditions.
4) Latching relays are shipped from the factory in the reset state. A shock to the relay during shipping or installation may cause it to change to the set state. Therefore, it is recommended that the relay be used in a circuit which initializes the relay to the required state (set or reset) whenever the power is turned on.
5) Check the ambient conditions when storing or transporting the relays and devices containing the relays. Freezing or condensation may occur in the relay, causing functional damage. Avoid subjecting the relays to heavy loads, or strong vibration and shocks.
